

AI-Powered Analysis for JD Edwards

From technical complexity to business clarity in seconds

Reading and interpreting JD Edwards code is rarely straightforward. Our in-house AI agent helps analysts and decision-makers make sense of it by turning raw code into visuals, documents, and plain-language explanations. It bridges the gap between technical details and business insight.

Visualize Complex Code

JDE code does not need to stay a mystery. The AI agent converts it into flowcharts and visual diagrams, mapping every condition and logic branch. Analysts can quickly see how a program works and share that view across teams. Processes that once required developer explanation become easy to follow.

Generate Functional Documentation

Documentation no longer has to be a manual burden. The AI generates functional analysis documents directly from the code and explains how processes work in clear terms. Business users and IT teams gain a shared understanding without long back-and-forth sessions. It is faster and more consistent.

Create Automated Test Cases

Testing is critical, yet it often eats time. From the code, AI creates user test cases and suggests datasets for both success and failure scenarios. Validation starts sooner and covers the conditions that matter. Teams reduce trial and error and build confidence earlier.

With our AI agent, analysts can understand and test JDE code without needing to read a single line.

Compare Code Versions

Upgrades and code changes are hard to track. The AI compares two versions of JDE code and highlights the differences in plain terms. Analysts see what changed and why it matters, without reading line by line. This supports faster, safer decisions during updates or migrations.

Translate Code into Plain Language

Not everyone speaks developer. The AI translates code into business-friendly explanations so analysts and decision-makers can interpret and communicate processes with confidence. Technical complexity becomes clear, practical knowledge for the whole team.

Why It Matters

- Easier for analysts to quickly interpret JDE code
- Faster testing cycles with AI-generated scenarios
- Fewer errors or oversights in updates and testing
- Clearer documentation across teams
- Stronger collaboration between business and IT
- Automatic listing of audits and adjustments to be made

JD Edwards runs better when everyone understands it. The AI agent ensures your code is clear, testable, and easy to share, helping your business move forward with confidence.

Since 2004, Era Consulting Group has helped enterprises modernize JD Edwards with ERP optimization, AI, custom integrations, and connected commerce.
